

DB/Text® *WebPublisher PRO*

Affordable Web Interactivity Without Extensive Programming

An XML-Enabled Web Publishing Solution

DB/Text *WebPublisher PRO* and the DB/TextWorks® software provide a fully integrated database system with the capability to store, search, and obtain information (text, multimedia, and images) on the Web. DB/Text *WebPublisher PRO* provides all of the advantages of Web interactivity at an affordable price, allowing customers to create and deploy databases of various types and formats to the Web. Unlike many Web publishing tools, which require that customers develop and design their own Web forms and reports, DB/Text *WebPublisher PRO* will include an XML Forms Library, making it easy for even non-technical users to publish their databases interactively on the Web by offering a set of pre-programmed templates for Web queries and reports. DB/Text *WebPublisher PRO* joins a family of Web publishing products that Inmagic has offered since 1996 that provide easy-to-use and scalable solutions to accessing and deploying information on the Internet or a corporate intranet.

Find Information Fast

With DB/Text *WebPublisher PRO*, our high-speed fielded search engine makes finding information fast, easy, and precise. DB/Text *WebPublisher PRO* performs keyword searches through hundreds of thousands of records in under a second! You can even narrow or broaden your searches by querying multiple fields to customize your results. And you don't have to wade through a sea of hyperlinks or hundreds of hits to find exactly the information you need. With DB/Text *WebPublisher PRO* you can get precisely the information you need because it gives the user the ability to search and retrieve information based upon the content of documents as well as with conventionally structured fields.

Update and Maintain Documents Effortlessly

Updating and maintaining thousands of HTML documents is tedious work. Because DB/Text *WebPublisher PRO* manages your Internet/intranet information within the framework of a textbase, you can update and maintain your information through batch import, delete, and modify functions.

Standards-Based Web Publishing

Through the use of XML, HTML, and SOAP, DB/Text *WebPublisher PRO* is fully open and standards-based, providing the capability to:

- Publish content to the Internet via a Web browser
- Edit records in a browser
- Create interactive forms with third party tools
- Customize reports to your Web site design
- Tightly integrate DB/Text textbases with other applications
- Take advantage of Inmagic's new XML Forms Library

Because Extensible Markup Language (XML) separates the content from its formatting within a Web page, you can focus on what the information is, rather than how the information is displayed. All of the read/write capabilities of *WebPublisher PRO* - the ability to edit, add and delete records via the Web - are available using XML.

Delivering Content to Organizations Worldwide With Interactivity for Users

Many of the world's most prominent companies, universities, law firms and government agencies have chosen DB/Text and its Web publishing solutions to manage business intelligence, research content, image and archive databases, product catalogs, help desk knowledgebases and more. Because DB/Text *WebPublisher PRO* is easy to deploy and can support databases with thousands of documents, it is ideal for information-intensive organizations who require Web-based content management solutions.

Today end users expect their corporate intranet or Internet-based services to be interactive - to support capabilities such as selecting a group of documents to email to a colleague. Authorized users may even wish to edit documents directly. DB/Text *WebPublisher PRO* supports these interactive capabilities. Inmagic's XML Forms Library provides templates that can be customized to integrate with intranet or Internet designs.

DB/Text PowerPack™ and ODBC Driver

Inmagic's DB/Text *WebPublisher PRO* includes DB/Text *PowerPack* and DB/Text *ODBC Driver*. *PowerPack* is an industrial-strength backend server tool for populating and maintaining knowledgebases in an automated fashion. DB/Text *ODBC Driver* provides open access to Inmagic's specialized textbase structure. DB/Text *PowerPack* can be used with the *ODBC Driver* to index and maintain your textbase information in real time.

About Inmagic

Inmagic is a global provider of content and information management software and services that organize and deliver enterprise content, seamlessly integrate both internal and external content sources and deploy business-critical information to corporate portals, intranets, extranets, and the Web. Specific applications include market, business, & competitive intelligence, library automation, litigation support, and Web publishing. Inmagic's information management solutions are installed in more than 15,000 special libraries and information centers in over 50 countries.

WebPublisher PRO works with your DB/TextWorks textbase for seamless read/write integration with your corporate intranet or on the Web
